Yes

Inception date

September 2017

Investment objective:

The objective of the 27Four Life Imali Smart Maximiser Portfolio is to offer investors a moderate to high long term total return mainly through the use of passive investment strategies.

Investment philosophy:

The fund will mainly invest in exchange traded funds and index related securities. However, an active component may be included where deemed fit by the investment manager. Asset allocation and investment allocation factors may include factors such as market, defensive, quality, value and momentum strategies, and will be used with the aim to deliver better risk adjusted long term total returns than the market for similar risk profiled portfolios. The investment manager will apply and or rotate the factors and indices which they deem most appropriate to cater for the varying market conditions and investment cycles. The portfolio provides investors access to capital growth over the long term and may exhibit levels of volatility and possibly capital loss over the short term. The portfolio will be managed in compliance with prudential investment guidelines for retirement funds in South Africa to the extent allowed for by the Act with a maximum net equity exposure of 75% of the portfolio's asset value.

Portfolio description

The **IMALI Smart Maximiser Portfolio** will be measured against the ASISA Multi-asset high equity average. The Portfolio aims to provide maximum growth in capital that is greater than the benchmark, over a rolling 6-year period. The portfolio will be managed by implementing a core-satellite approach and will blend active and passive management and will only switch instruments as and when identified by the quantitative selection process. Furthermore, the portfolio will invest in Exchange Traded Products due to their low cost, transparent and diversified nature. The portfolio will also consist of Alternative Investment products that aim to reduce the price volatility of the portfolio. The portfolio is ideal for risk averse investors with a long-term investment horizon. Distributions received from the Portfolio will automatically be reinvested into the portfolio in order to maximise total returns and optimise tax efficiency.

Portfolio Construction Strategy

The portfolio construction follows a cost effective and transparent core-satellite management style. Investment objectives are achieved by abiding to strict risk control measures as well as implementing a smart beta and stand fast investment philosophy. The portfolio is constructed according to a strategic asset allocation diversified across a range of asset classes and are invested in Exchange Traded Products (ETFs). These include domestic equities, domestic interest-bearing assets, domestic listed property, international equity, international property and cash. The Portfolio intends to reduce an element of volatility by investing in Alternative Investment Vehicles, however, short term fluctuations may occur.

The underlying instruments and securities selected within each asset class has been selected to best meet the portfolios mandate. Actual asset class weights can move away from the strategic benchmark asset allocation within selected tolerance bands. Specific Rebalancing methodologies are continuously evaluated and are optimised for cost efficiency.

About the Portfolio Manager

Renier Robbertse, B Com

Renier's expertise is vast in traded equities, bonds and instrument on various bourses around the world, traded forex across various currencies, structuring portfolios and international investment solutions, wealth offshore trading across jurisdictions, including the setup of offshore structures and structured finance deals. Notes:

1. The performance of the **Model Portfolio** represents the theoretical performance of the strategic asset allocation without the impact of actual investment cash flows. The performance numbers are simulated and not actual, using a back-testing method.
2. All returns quoted are net of fees – that is, after deduction of all expenses as quoted in the Portfolio Management TER. Returns for periods exceeding one year are annualised. All returns are in Rands.
3. The benchmark is a composite benchmark as per the weights and indices as indicated on the first page. The return is an estimate and is displayed as a general guide which is subject to change without notice to investors.
4. All holdings information is based on latest available data. There may be differences in totals due to rounding.
